## Ennio's Got Elastic String Covered

Ennio International has been providing quality netting and casing solutions to the meat and poultry industry for over 25 years. Well known for their innovative patented products designed to ensure processes and applications are made easier for your business, they have now added another such product to their range.

The new Patented Ennio Elastic String Precision Cover ensures there are no more tangles of your string and less breakages resulting in reduced down time of your stringing machine.

Ennio Elastic String is extremely strong, food-grade quality and is for use on automatic stringing machines. It can be cooked, smoked or roasted and during cooking clings to the meat, holding the product in shape which results in better slicing. Available in both red and white for product differentiation it gives an attractive appearance for your product, even on irregular cuts of meat. Various string grades and strengths are available and can be designed to suit your needs.

The new Precision Cover is a food-grade polypropylene mesh which encases the elastic string on its cone, holding the string in place as it unwinds and reduces in size. This original invention prevents the string from getting caught and allows free flow right through to the end of the cone. No more breakages, interruptions or frustrating restrictions due to tangling and a saving on both time and profit.

**Ennio, finding solutions to make your life easier.**
